

3 Million Documents : 11-Member Boutique Litigation Firm

SMALL FIRM LEAPS TO FOREFRONT OF EFFICIENCY & COST CONTROL BY LEVERAGING TECHNOLOGY

The experienced litigators at Torre, Lentz, Gamell, Gary & Rittmaster are rarely daunted by large challenges, and a recent construction matter with over 3 million documents was no exception. Even though they were up against much larger firms and state agencies, the Torre team knew they had technology and low-cost alternatives on their side.

“Valora keeps up with our needs, always providing a **clever solution or cost-effective approach** to dealing with the latest conundrum.”

Kevin Gary
Partner

To help manage incoming materials from over a dozen parties and FOIA requests, the client turned to Valora Technologies to organize, process and present the data as efficiently as possible.

Using its PowerHouse™ AutoIndexing and AutoReview technology platform, Valora routinely processed over 100,000 documents a day, saving countless hours of support staff time.

The client was able to hand-pick which documents to add a layer of manual quality control to and which to leave alone post-automation. This blended “Level of Treatment” approach ensured efficient and cost-effective use of the client’s budget.

Based on their successes working with Valora on numerous matters, the Torre team has incorporated AutoCoding & AutoReview as best practices into all of their major construction litigation matters at the firm.
