VALORA TECHNOLOGIES LAUNCHES NEW INFORMATION GOVERNANCE SOLUTIONS WORKSHOPS

Focus is preparedness for Information Governance and execution of policies for electronic records and information

BEDFORD, MA – February 14, 2018 – Valora Technologies, Inc., the leader in File AutoClassification for Information Governance, Records and eDiscovery, announced today its launch of new Information Governance Solutions Workshops. The workshops were created at the request of several Valora clients seeking an opportunity to educate and prepare their organizations for the requirements of Information Governance prior to implementing an AutoClassification system for wide-spread file analysis, remediation and migration. The workshops are offered as half-day, full-day, and multi-day packages, specifically designed by Valora's Information Governance consultants, armed with years of experience in enterprise information management. Each workshop helps organizations explore, prioritize, and manage their information challenges, initiatives, procedures, and policies around Information Governance and content control.

Each workshop assesses the client's key business functions and information management practices, resulting in a prioritized, custom plan of action based around the organization's unique:

- IG and RIM policies
- Risk tolerance
- Culture
- Compliance
- Business objectives
- Existing tools

"Digital and document assets are the lifeblood of any knowledge-based organization. It is no surprise that these assets are ballooning in volume and complexity, with commensurate risk and exposure in their management, retention, analysis and disclosure," said Sandra Serkes, Valora's President and CEO. "Valora's technology solutions for Information Governance revolve around intelligent organization and control of data, documents and content, using rigorous methodologies and best practices. Now we are delighted to compliment the product use cases with a strong set of Information Governance readiness workshops, designed specifically to streamline adoption of AutoClassification and machine learning technology."

Valora's assessment methodology was developed using the industry's best practices, based on ARMA International's Generally Accepted Recordkeeping Principles® and Maturity Model for Information Governance®. Valora's core disciplines revolve around document, data and content analysis and control, specifically for enterprises undergoing a digital transformation around Information Governance, Records and eDiscovery.
