

## BlackCat Data Visualization & Hosting Proof of Concept

### Proof of Concept Overview

Valora has designed a Proof of Concept (“POC”) offering that allows select clients a chance to evaluate our game-changing solutions for Data Visualization and Hosting. There is no risk or capital investment to participate in this program. There is a small fee, which is credited toward a future project should you agree Valora’s solution works!

### Proof of Concept Elements

- Valora performs coding, review and/or analytics on a live project or against a project that was previously completed. Valora will analyze documents for up to 10 fields of coding or document review, including basic bibliographic fields (Author, Title, Date, etc.), as well as Privilege, Relevance or NearDuplicates.
- Valora will accept up to 20,000 documents (additional documents may increase the cost).
- Client must designate a case team member with intimate knowledge about the case and the issues associated with it – a Subject Matter Expert (“SME”), typically an attorney.
- The designated SME must commit to participate in the POC and interact with Valora’s team as necessary.
- SME participation includes providing Valora’s Project Manager with a full overview of the case, responding to inquiries about our results, reviewing specific documents to confirm the accuracy of our automated processes and providing feedback around BlackCat’s configuration.
- The client must also designate a technical resource within their firm or organization to address output requirements and to troubleshoot any loading issues.
- Client agrees to sign a contract with Valora that outlines the terms of the POC, including an agreement to render payment for services performed.

### What is BlackCat?

**BlackCat™** is a hosted data platform for large-scale, document-intensive matters in litigation and records management. Inside BlackCat, users appreciate easy, instinctual point & click reporting; unlimited search, correlation and classification capabilities; data tracking, trendlining and forecasting; and an ability to track their processing, analysis and review progress in real-time.

BlackCat is not a large-scale manual review platform, but rather a reporting and auditing mechanism specifically for complex analytics processing. BlackCat is especially optimized for projects requiring heavy automated data analysis and processing, rather than mostly linear or manual workflows. BlackCat has been especially tuned to optimize and display Valora’s unique analytics results, such as graphical representations of who communicates with whom, and how different Issues, People and Document Types manifest over the lifetime of the matter.

**Total Cost**  
**\$3,500**

*Valora reserves the right to deny any request for participation in this program if any of the client requirements are not met. Valora reserves the right to cancel the POC with no notice if the client is not meeting the requirements for POC participation.*
