

CASE STUDY

3 Million Documents: 11-Member Litigation Firm: Small Firm Leaps To Forefront of Efficiency & Cost Control by Leveraging Technology

SITUATION

The experienced litigators at this well-known law firm are rarely daunted by large challenges, and a recent construction matter with over 3 million documents was no exception. Even though they were up against much larger firms and state agencies, the team knew they had technology and low-cost alternatives on their side.

CHALLENGE

To help manage incoming materials from over a dozen parties and FOIA requests, the client turned to Valora Technologies to organize, process, and present the data as efficiently as possible.

SOLUTION

Using its PowerHouse™ AutoIndexing and AutoReview technology platform, Valora routinely processed over 100,000 documents a day, saving countless hours of support staff time.

RESULTS

The client was able to hand-pick which documents to add a layer of manual quality control to and which to leave alone post-automation. This blended “Level of Treatment” approach ensured efficient and cost-effective use of the client’s budget.

Based on their successes working with Valora on numerous matters, the client has incorporated AutoCoding & AutoReview as best practices into all of their major construction litigation matters at the firm.

SOLUTIONS APPLIED:

- AutoClassification
- Document Analytics
- Electronic File Processing
- OCR & Text Extraction
- Analytics & Data Mining

PRODUCTS USED:

- PowerHouse
